9. Slow and steady ____ the race. (win / wins)
10. The news ____ true. (is / are)

QUE:3 Read the following passage and answer the questions given below:

05

Climate change has become one of the most serious challenges facing humanity in the 21st century. Rising global temperatures, melting ice caps, unpredictable weather patterns, and frequent natural disasters are clear indicators of the environmental crisis. Scientists warn that if greenhouse gas emissions are not controlled, the Earth's average temperature could rise to dangerous levels, threatening ecosystems and human survival. Governments across the world are working together to reduce carbon emissions by promoting renewable energy sources such as solar and wind power. However, individual efforts also play an important role. Simple actions like reducing electricity usage, avoiding plastic, planting trees, and using public transport can make a big difference. Combating climate change requires collective responsibility, awareness, and commitment from both governments and citizens.

Questions:

1. What are some indicators of climate change mentioned in the passage?
 2. What warning do scientists give about the rise in Earth's average temperature?
 3. How are governments trying to reduce carbon emissions?
 4. Mention two individual actions that can help fight climate change.
 5. What does the passage suggest is necessary to combat climate change effectively?
-
